

Doris LaMontagne, North Thetford, VT.
Good day,

I am writing to express my concerns with the dam operations.

Peaking power operations cause dramatic changes in water levels. Increased raising and lowering of the water levels for this purpose damages the river bank's health and destroys the riparian buffer. Furthermore, I have observed an increase in river silt, which can only serve to damage the quality of the water. Please consider reducing the frequency.

Respectfully, Doris LaMontagne
