

Diane Szawlowski Mullins, Hatfield, MA.

The July 2023 Flood caused a disaster for our family potato farm. With over 350 acres destroyed by CT river water flowing up over the banks, causing 3.5 million in damage to our crops, we feel there is a need to do something to control water levels during heavy rains. With the climate changing and the possibility of heavy rains happening more often, we need better control of the river water running through this vital agricultural community. Please consider visiting this issue before relicensing.
