

Alexandra Sellschop, Norwalk, CT.

I am a student in Windham County and I'm aware of the benefit to local wildlife when Upper Meadows is delayed mowed. Grassland bird species are in decline across New England because of loss of breeding habitat. I am asking that Great River Hydro continue to fund the delayed mowing at the Upper Meadows to support bird breeding there. Birds are a key part of the ecosystem and as humans, the cause of their decline, we have a moral and environmental obligation to protect them. Please don't let this wonderful species die out do to our destruction of their habitat.
